Learning Outcomes

Upon completion of the program, graduates will be able to:

- Interpret basic concepts in supply chain management such as purchasing, production, operations, logistics, integration and reverse supply chains.
- Describe analytical methods for decision-making in supply chains, such as demand planning, supply chain network design, production planning, inventory control and transportation.
- Describe the role of global supply chains, and principles of effective supply chain management, in the economy to match supply and demand.
- Describe the role of data, analytics and technology in modern supply chains.
